

**Department of Parks and Recreation, Division of Boating and Waterways
Beach Erosion Control and Public Beach Restoration Programs**

QUALIFICATION REQUIREMENTS

DBW reviews each Application to verify compliance with the requirements below. If any of the statements below is **false**, DBW does not recommend funding through these Programs.

- Although private interests may incidentally benefit from the proposed project, benefits to public interests are the only reasons the Applicant is requesting a grant.
- The Applicant guarantees it will own the property through 20 years after completion.
- There is public access to the shoreline area the project would protect.
- The project is authorized under a Coastal Commission-approved local coastal program.
- Existing studies, reports, and/or designs suggest the proposed project described in the grant application is feasible.
- Project is not duplicative of other nearby shoreline work without providing clear additive benefits.
- If previous project(s) at site failed, this project appears to address the reasons for the past failure.
- Construction of the project does not appear likely to have an overall adverse impact on reserved federal lands.
- Applicant has consulted an engineer or subject matter expert regarding the project.
- The project is compatible with other projects in littoral cell, OR the Applicant has made a substantial effort to find out.
- The application presents a credible plan for fully funding the project.
- The proposed project can be completed by the end of the third year in which funding would be available.
- The application includes a credible project schedule.
- The benefit and cost information is credible and indicates benefits will exceed costs.
- The cost matching requirement is identified in the application.
- Applicant has provided all necessary resolution(s).
- Signature and attestation language are provided.
